

5 Lessons

I Wish I Knew Before Joining NITK

Things I learned after cracking JEE,
joining NITK, and becoming part of
technical clubs.

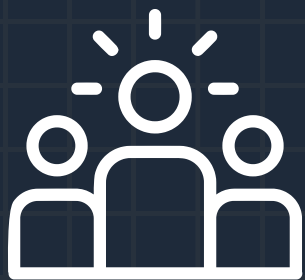

1. GPA Isn't Everything

When I was preparing for JEE, I thought getting into a good college would solve everything.

But opportunities often go to students who can:

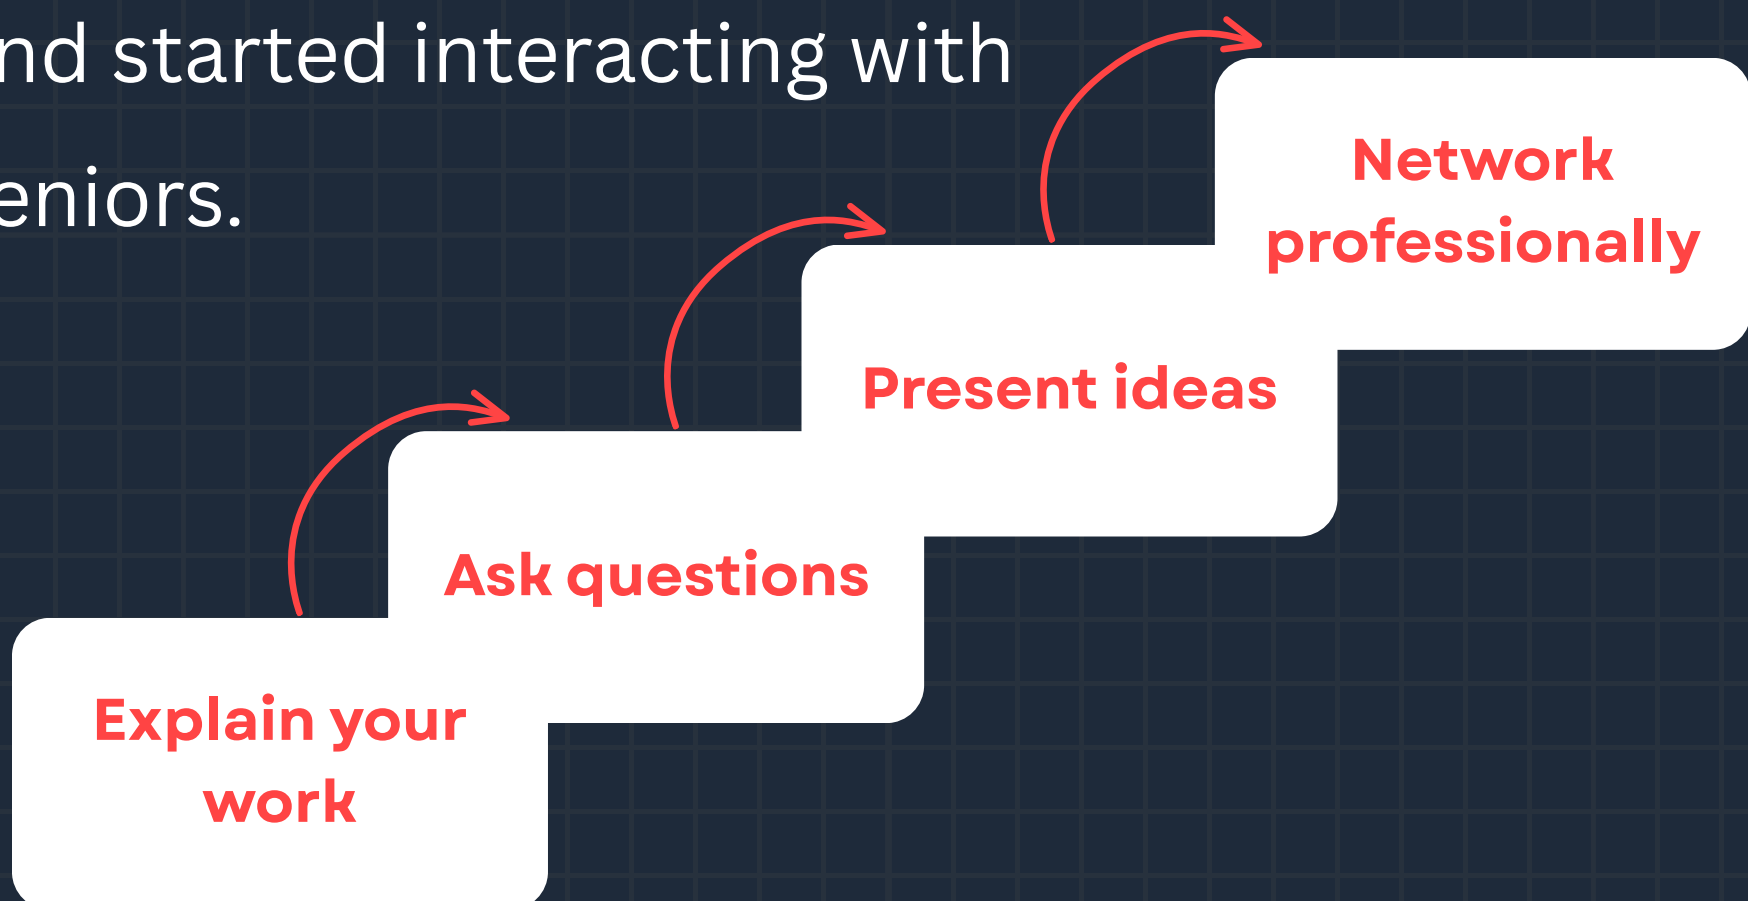

- Build Projects
- Communicate clearly
- Lead teams
- Solve real problems

Your skills decide how far you go.

2 . Communication Matters More Than You Think

I used to believe technical skills alone were enough. Then I joined technical clubs and started interacting with seniors.

3 . Build Projects, Not Just Notes

My biggest learning at NITK didn't happen
inside a classroom.
It happened while working on projects and
club activities.

Projects teach you:

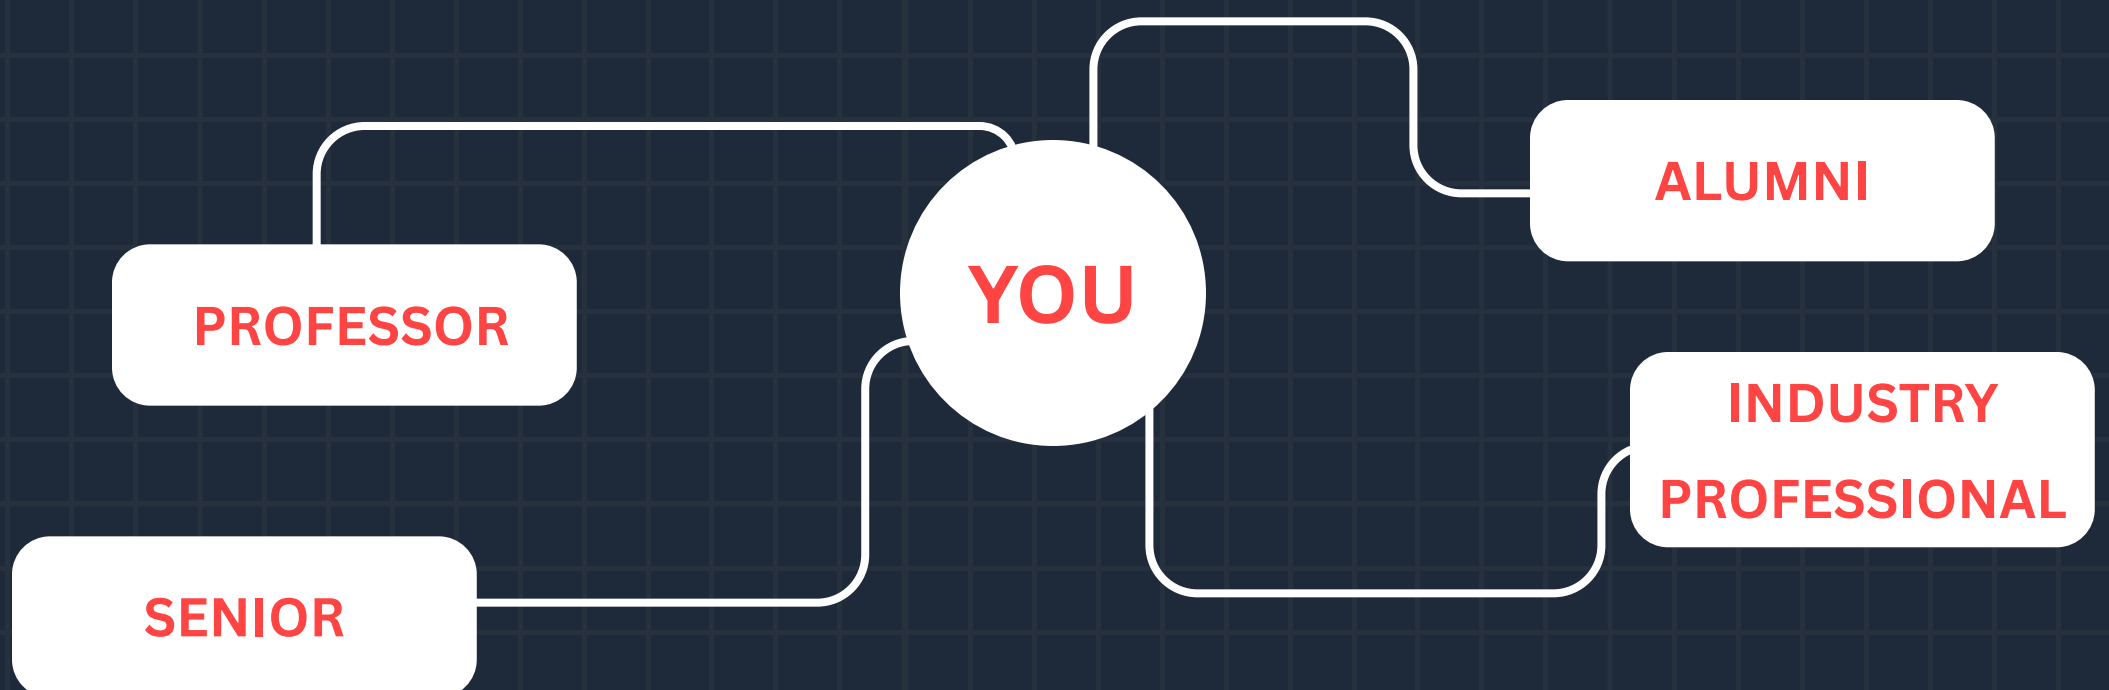

- Face real problems
- Debugging and troubleshooting
- Work with teams
- Practical application

4 . Network Before You Need Help

In my first few months of college,
I mostly focused on classes.

Later, I realized seniors, alumni, and professors were
sharing opportunities I never even knew existed.

Opportunities often come through
people who already know your work.

5 . Start Early, Stress Less

My JEE preparation taught me one lesson:

Small efforts repeated daily beat last-minute hard work.

Small actions taken consistently beat last-minute efforts every time.

Remember These 5 Lessons

- ✓ GPA helps, but skills matter too
- ✓ Communication creates opportunities
- ✓ Build projects, don't just consume content
- ✓ Network before you need something
- ✓ Start early and stay consistent

Engineering is easier when you focus on growth not just grades.

Which Lesson Hit You The Hardest?
